## Institutional Treatment of Tuberculosis

means that the patient is given constant attention; that the regime which is found to be best adapted to the case is rightly adhered to; that a resident physician is at hand all of the time, studying the case and adapting the treatment to it; that nursing service is the best. All of these things mean improvement, greater comfort and possible recovery. Hazelwood is operated without profit by the Louisville Anti-Tuberculosis Association. Rates \$12.50 a week. Write for detailed information.

## Hazelwood Sanatorium

Station E DR. O. L. MILLER, Physician in Charge LOUISVILLE, KY

### Bananas Are Nutritious.

Bananas are always wholesome, nutritious, cheap, easily digested, always in season, all meat, easy to handle, need no cooking or raw. Nature's hermetic seal keeps them in a dust and germ-proof package. And, above all, they are produced without drawing on the nation's resources, and their importation from our Latin-American cousins aids in developing a reciprocal market for our goods.—Exchange.

### Needed Two of Them.

Mary Ellen had a new baby brother, and it was her delight to sit in her little red rocker and hold baby brother in her arms. Aunt Amy was visiting them one day, and Mary Ellen, coming in from play, found her holding baby brother. She stood watching her aunt with longing eyes for several minutes, then, turning to her mother, she said: "I wish brother was twins."

## FINDS WAY TO KILL WEEDS

Hawaiian Sugar Grower Has Reduced Labor of Maturing Cane by More Than One Half.

The new weed-destroying method developed by Charles F. Eckert in the sugar-cane fields of the island of Hawaii is stated in a commerce report to have reduced the labor of maturing the cane more than one-half, while the crop has been increased by an average of ten tons per acre.

Shortly after the harvest the cane stubble is freed from trash and fertilized in the center of the rows, and is then covered with strips of tar or asphalt felt. The paper is held in place along the rows by stones, with the trash heaped over the edges of the strips. The young shoots of cane are spearlike and rigid, and are thus able to penetrate the paper, while the weeds which cannot get through are soon smothered and dried up by the heat concentrated beneath the covering. The shoots are aided somewhat by laborers who five or six weeks after the paper has been applied, pass along the rows, cutting slits where the pressure has raised tentlike elevations. The shoots are much blanched as they emerge, but quickly turn green and take on a vigorous growth.

The best of many papers tried is black sheathing felt weighing not more than nine pounds per hundred square feet. Not only are the weeds destroyed, but the plants profit by the mulching action, with the great amount of heat absorbed and imparted to the soil.

## THE MISSING LINK

He—I may not be so terribly smart myself, don't you know, but my ancestors were educated in the higher branches.

She—I can well believe it.

## LOCATING BULLETS.

One of the most notable developments in surgery in the war hospitals has been the improvement of means for locating the bullet in a wound. Three electrical methods have been developed, each of them far superior to anything previously in use. One of these devices is magnetic in character; a second, probably the best known, is a telephonic device. The last to be perfected, said to be the best of all, makes use of the galvanometer principle, wherein the bullet makes its presence known by its effect on an electric current. This device is said to indicate not only the location of the ball, but also the depth to which it has penetrated.

## SALVAGE METAL FROM SEA.

A means of making use of the electric magnet under water has been devised in Japan, and it promises to be of great assistance in locating sunken vessels, to recover which salvage operations on a big scale are expected after the war. Tests on this magnet have recently resulted in bringing up thousands of Japanese shells, fired in practice at sea, and it is now understood that it will be used in extracting shell scraps from European battlefields. The value of the iron at present is huge.

## SCIENTIFIC MEMORY.

Hostess—Oh, professor, haven't you brought your wife?  
Professor—There! I know I had forgotten something.

## A CONDITION.

"Do you believe Germany wants a lasting peace?"  
"Oh, yes, if she can get the biggest pieces."

## OF COURSE.

"Jones has invented a machine to lay the dust."  
"His object being to raise it, I suppose."

## HOME-GROWN SEED IS THE SUREST AND BEST SELECT SEED CORN

ENOUGH FOR TWO YEARS

For 1918 Plantings and to Insure Adapted Seed for 1919

**START RIGHT—NOW!**

## WHERE?

In the field from standing stalks of a variety that has "made good" and become locally adapted.

## HOW?

Pick best ears from plants showing best yields in fair competition with neighboring plants. Storm-proof plants with hanging ears give best seed. Long ears with large, uniform kernels are the best. Avoid sappy ears heavy with water.

## WHEN?

As soon as ears are ripe and hard—before heavy frosts or autumn rains injure the kernels for seed. The day the ears are selected they should be hung where they will become thoroughly dry in a few days.

## WHY?

It pays. Field selection of seed corn is one of the surest and best paying operations on the farm. Proper care of seed corn pays well. Tests show that properly cared for seed corn has yielded eighteen bushels more per acre than crib-stored seed from the same field.

Insure a Right Start for Your Next Two Corn Crops by Saving Ample Seed Now

For Further Information Ask Your County Agent, or Write for Farmers' Bulletin 415, "Seed Corn".
